

Amendments to the Specification:

Please amend the following paragraph beginning at page 2, line 16 as follows:

5 In the above-described second prior art on-line shopping system, however, if the user takes a ~~long~~ **long** time to select the goods information, such a long time may create a serious problem, since other users are affected by the long time, which ~~would decrease~~ **decreases** the efficiency of the on-line shopping system.

Please amend the following paragraph beginning at page 6, line 24 as follows:

10 **The Next, the** operation of the on-line shopping system of Fig. 5 is explained ~~next~~ with reference to Fig. **5 6**.

Please amend the following paragraph beginning at page 6, line 36 as follows:

15 Next, the user reads the goods information provided by the on-line shopping company, ~~so that~~ **and** the user selects one of the goods information. For example, if the goods information includes ticket information, the user specifies a date, a grade and the number of tickets. Then, as indicated by A3, the user transmits the selected goods information along with his or her pre-allocated ID number to the Internet commerce provided server 3.

20 Please amend the following paragraph beginning at page 8, line 3 as follows:

25 In Fig. 7, which is a timing diagram showing a modification of the timing diagram of Fig. 6, if the user wants the combination of images provided by the Internet commerce provided server 3, as indicated by A3', the user carries out a combining operation of images at the user terminal 2A, and then, ~~the~~ transmits the combined images to the Internet commerce provided server 3. Note that the Internet commerce provider server 3 has a storing unit for storing combined images in correspondence with ID numbers.
